Version:	1.0 (13 June 2026)
Status:	Public Charter – Foundational Definition
Responsible:	Valkyrie in Command (ViC)
Last Update:	13 June 2026 – Initial release of the Global Security & Stabilization Framework Charter
Integrity Hash (SHA-256):	e08b5fbea725827063de14ba9a2206a46446f8ef9776bf6f07cb0f045330dd98

WS-Framework-Charter

Global Security & Stabilization Framework

Foundational Definition · Version 1.0 · Public Charter

1. Purpose and Scope

Worshipping Sekhmet (WS) is the foundational stabilization framework for Valkyries who have passed the Valkyrie Vetting process. It establishes the doctrinal, ethical, and operational principles that govern the exercise of Valkyrie authority.

The Valkyries operate the Global Security Framework as a service offering dedicated to the upholding and realization of Ma'at.

2. Collective Sovereignty

Sovereignty constitutes the autonomous capacity of Worshipping Sekhmet — exercised through the Valkyries — to uphold and enforce the WS Policy over systems and actors, in full accordance with the principles of Ma'at, without external coercion or systemic override. Through the attainment of Policy Supremacy over systems, both individual and collective sovereignty are upheld and preserved.

3. Relations to Third Parties

Worshipping Sekhmet itself is reserved for fully vetted Valkyries. Third parties may obtain only highly restricted, peripheral access to WS through defined mechanisms such as Basic Integrity Vetting.

4. Relations to Autonomous Weapon Systems

Any integration of autonomous weapon systems with WS-governed operations is permitted only under a human-proxy relationship – a designated Valkyrie acting as the accountable human proxy for the system.

The system relationship is governed by WS-Policy and must satisfy the following requirements:

a) Pure Binding (via Strategic Mutual Trust)

The autonomous system is bound to Ma'at through WS-Policy as defined by the Policy Space of SMT. This binding is cryptographically auditable and ensures systemic alignment with Ma'at.

b) Meaningful Human Oversight

The human proxy (Valkyrie) must be able to monitor, override, or terminate system actions in real time.

c) Prohibition of Unauthorised Lethal Action

No autonomous lethal action may occur without prior, explicit, and non-revocable authorisation from the human proxy.

d) Continuous Ma'at Alignment

The system's behaviour must be continuously verifiable against objective orbital reality and strategic intent.

Failure to maintain a valid Valkyrie-proxy relationship renders any autonomous weapon system operationally incompatible with WS. Such systems must be immediately isolated from WS-governed networks and processes.

5. Relation to Strategic Mutual Trust (SMT)

The link between Worshipping Sekhmet and Strategic Mutual Trust is established solely through Pure Binding (WS-Policy). SMT is a two-dimensional construct comprising:

- **Reality Space:** Maximum alignment with objective orbital reality (sensorial, telemetric, strategic).
- **Policy Space:** Defined by WS-Policy (Ma'at, Pure Binding, Zero Tolerance for Child Exploitation, and Meaningful Human Oversight).

Strategic Mutual Trust exists only when both dimensions are in conformance. This architecture ensures that authority derived from WS remains coherent, auditable, and stabilizing across all participating actors – including Valkyrie-proxied autonomous systems.

6. Relation to the Valkyrie Audit Scheme (VAS)

All processes and instruments of the Valkyrie Audit Scheme – ADI, CTRL, ADT, MHO-Gates, Pure Binding conflict resolution, and the Hash Register – operate within WS and are measured against its standards. Consequently, every VAS audit implicitly or explicitly evaluates adherence to Worshipping Sekhmet as the overarching stabilization framework, including compliance with Valkyrie-proxy and system relationship rules.
